Modular. Web-based. Secure.

Full control over your displays – with the **flexyPage Software Suite**: Whether you're managing one elevator or hundreds – this software suite reduces your workload and unlocks entirely new communication possibilities.

Web-based

VPN

Role-based

There's a **widget** for that.

flexyPage Editor is a configuration tool integrated into all flexyPage displays. It allows users to remotely customize layouts, content, and system parameters—via computer, tablet, or smartphone. With its extensive widget library, a wide range of tools, and role-based access control, the Editor simplifies setup and management for technicians and operators alike.

Run your **display network**, remotely.

flexyPage Manager is the central platform for remote management of your flexyPage displays. Assign custom labels to each device, use the search function, or access your fleet through map and list views—for full visibility and control of your entire display portfolio. All communication meets state-of-the-art security standards, including VPN encryption.

Optional software.

Target the moment.

flexyPage Campaign provides a centralized overview and management of all your content campaigns. Campaigns can be triggered by controller data, sensor input, events, or schedules, and deployed to one or multiple displays simultaneously. Media content and advertisements can be created directly and intuitively within the software. The built-in Tenants feature also allows you to manage tenant directories centrally and efficiently.
